

**Michigan Department of Natural Resources
Timber Report
Second Quarter Fiscal Year (FY) 2014-15**

Background

Michigan's state forest system was originally certified under both the Sustainable Forestry Initiative (SFI) and the Forest Stewardship Council (FSC) third-party forest certification standards in December 2005. To date, Michigan has successfully retained certification under both standards.

The Department of Natural Resources (Department) investment in forest certification strengthens Michigan's forest products sector. Certification is essential in order for primary and secondary wood producers in Michigan to have continued access to national and international markets.

Second Quarter FY 2014-15 Timber Treatments

State forest planning and activities, including timber treatments, are conducted within the framework of SFI and FSC forest certification principles and standards, which require both multi-disciplinary Department staff and public participation. The Department utilizes the compartment review process for public participation and approval of treatments. Timber treatments in a given year are based on decisions made two years prior to actual implementation of the treatments.

The FY 2014-15 plan of work currently identifies 67,011 acres for timber sale preparation that were prescribed for treatment and approved through the compartment review process.

Timber sale preparation is done by Department staff and through timber marking contracts with private consultants. Through the first two quarters of FY 2014-15, Department staff has prepared 6,190 acres of timber sales, with an estimated volume of 99,582 cords. This represents an average of approximately 16.1 cords per acre.

In addition, 7,194 acres of timber sale preparation-marking contracts have been awarded through the second quarter. These acres will be prepared for sale by the end of the fiscal year. Contracts for an additional 5,097 acres are expected to be in place later in the fiscal year.
